Test Case Document					
Group Number - 29					Paranietharan B. - 214145R
Test Identifier	**Test Summery**	**Test Description**	**Precondition**	**Test Steps**	**Expected Result**
API Test Cases - Admin Role					
AUTH-API-ADMIN-01	Valid Admin login returns token	Verify ADMIN can login with valid credentials and receive JWT token	1. Admin account exists 2. Server is running	Send POST request to /api/auth/login with correct admin credentials	Status: 200 OK Response contains JWT token
AUTH-API-ADMIN-02	Admin login with invalid password	Verify ADMIN login fails with wrong password	1.Server is running	Send POST request to /api/auth/login with incorrect admin credentials	Status: 401 Unauthorized Error message in response
AUTH-API-ADMIN-03	Admin login with missing username	Verify validation when username field is missing	1. Server is running	Send POST request to /api/auth/login with admin credentials without username	Status: 400 Bad Request Validation error message
AUTH-API-ADMIN-04	Admin login with missing password	Verify validation when password field is missing	1. Server is running	Send POST request to /api/auth/login with only username	Status: 400 Bad Request Validation error message
AUTH-API-ADMIN-05	Admin login with empty JSON	Verify handling of empty request body	1. Server is running	Send POST request to /api/auth/login with empty json	Status: 400 Bad Request Validation error message
AUTH-API-ADMIN-06	Access protected endpoint without Admin login	Verify the admin cannot access protected admin endpoint without login	1. Server is running	1. access the admin only endpoint with POST /api/categories withtout jwt token	Throw 401 Unauthorized error message
AUTH-API-ADMIN-07	Admin can accesses read-only endpoint	Verify admin can access the user level read only endpoints	1. Server is running 2. user login with user credentials	1. access the admin only endpoint with GET /api/categories withtout user's jwt token	Get 200 ok with api response
AUTH-API-ADMIN-08	Verify that SQL injection attempts in login fields	Verify the sql injections not works in the authentication	1. Server is running	1. Login with credentials that includes the sql injection script	Status: 400 Bad Request Validation error message
AUTH-API-ADMIN-09	Non-JWT format in Authorization header with admin endpoint	Verify the non jwt formatted token can use to access the admin endpoints	1. Server is running	1. Access the admin only endpoint with POST /api/categories with the Non-jwt format authorization header	401 Unauthorized error
API Test Cases - User Role					
AUTH-API-USER-01	Valid User login returns token	Verify User can login with valid credentials and receive JWT token	1. User account exists 2. Server is running	Send POST request to /api/auth/login with correct User credentials	Status: 200 OK Response contains JWT token

AUTH-API-USER-02	User login with invalid password	Verify User login fails with wrong password	1.Server is running	Send POST request to /api/auth/login with incorrect User credentials	Status: 401 Unauthorized Error message in response
AUTH-API-USER-03	User login with missing username	Verify validation when username field is missing	1. Server is running	Send POST request to /api/auth/login with User credentials without username	Status: 400 Bad Request Validation error message
AUTH-API-USER-04	User login with missing password	Verify validation when password field is missing	1. Server is running	Send POST request to /api/auth/login with only username	Status: 400 Bad Request Validation error message
AUTH-API-USER-05	User login with empty JSON	Verify handling of empty request body	1. Server is running	Send POST request to /api/auth/login with empty json	Status: 400 Bad Request Validation error message
AUTH-API-USER-06	Access user protected endpoint without Admin login	Verify the user cannot access protected user endpoint without login	1. Server is running	1. access the user only endpoint with POST /api/categories withtout jwt token	Throw 401 Unauthorized error message
AUTH-API-USER-07	Access protected endpoint with user credentials	Verify the user cannot access protected admin endpoint without login	1. Server is running 2. User has valid JWT token	1. access the admin only endpoint with POST /api/categories withtout user's jwt token	Throw 401 Unauthorized error message
AUTH-API-USER-08	User accesses read-only endpoint	erify User can access read-only endpoints with valid JWT token	1. Server is running 2.User has valid JWT token	1. Send GET to /api/categories 2. Include Authorization token	Status 200 OK with categories data
AUTH-API-USER-09	Non-JWT format in Authorization header with admin endpoint	Verify the non jwt formatted token can use to access the user endpoints	1. Server is running	1. Access the user endpoint with POST /api/categories with the Non-jwt format authorization header	401 Unauthorized error
UI Test Cases - Admin Role					
AUTH-UI-ADMIN-01	Admin successful login	Verrify admin can successfully login and go to the dashboard page	1. At login page 2. Admin credentials known	1. Enter admin username 2. Enter admin password 3. Click Login	Redirects to dashboard
AUTH-UI-ADMIN-02	Verify username validation works for Admin	Verify the username in the login form correctly validates empty username	1. At login page	1. Leave username fields empty 2. Click Login	Username is required' Validation error message appears in the login page
AUTH-UI-ADMIN-03	Verify password validation works for Admin	Verify the password in the login form correctly validates empty password	1. At login page	1. Leave password fields empty 2. Click Login	Password is required' Validation error message appears in the login page
AUTH-UI-ADMIN-04	Login with incorrect admin credentials	Verify the login page shows the error messsage when wrong crendentials entered	1. AT login Page	1. Enter the wrong admin username and password	Invalid username or password' Validation error message appears in the login page

AUTH-UI-ADMIN-05	Admin logout works	Verify the Admin logout function correctly working when the logged in Admin click logout button	1. Admin is logged in	1. Click Logout	1. Redirected to login page
AUTH-UI-ADMIN-06	Admin logout correctly works	Verify the logout clear the jwt token	1. Admin is logged out before	1. Go to the dashboard url	The dashboard url need to redirect to login page
UI Test Cases - User Role					
AUTH-UI-USER-01	user successful login	Verrify user can successfully login and go to the dashboard page	1. At login page 2. TESTUSER credentials known	1. Enter testuser username 2. Enter testuser password 3. Click Login	Redirects to dashboard
AUTH-UI-USER-02	Verify username validation works for user	Verify the username in the login form correctly validates empty username	1. At login page	1. Leave username fields empty 2. Click Login	Username is required' Validation error message appears in the login page
AUTH-UI-USER-03	Verify password validation works for User	Verify the password in the login form correctly validates empty password	1. At login page	1. Leave password fields empty 2. Click Login	Password is required' Validation error message appears in the login page
AUTH-UI-USER-04	Verify form validation works for user	Verify the login form in the login page correctly validated	1. At login Page	1. Leave both fields empty 2. Click Login	Invalid username or password' Validation error message appears in the login page
AUTH-UI-USER-05	user logout works	Verify the user logout function correctly working when the logged in user click logout button	1. user is logged in	1. Click Logout	1. Redirected to login page
AUTH-UI-USER-06	user logout correctly works	Verify the logout clear the jwt token	1. user is logged out before	1. Go to the dashboard url	The dashboard url need to redirect to login page
AUTH-UI-USER-07	Password field shows masked characters	Verify the login form shows the passwords as masked characters	1. at login page	1. type the password	Passwords needs to appear as masked characters
AUTH-UI-USER-08	Access protected page without login	Verify the user cannot access protected pages without login	1. Server is running	1. Go to ui/dashboard	Throw some error message tells cannot access this page
