UI Test Case-User					
TC_UI_SALES_USER_01	Sales menu navigation	Verify user can open Sales page from sidebar	Logged in as USER	1. Launch the browser and navigate to the application URL http://localhost:8080 2. Log in as USER with valid credentials. 3. From the left navigation menu, click on the Sales option.	Sales page loads successfully and URL is /ui/sales.
TC_UI_SALES_USER_02	Direct URL access to Sales page	Verify user can access Sales page via direct URL	Logged in as USER	1. Launch the browser and navigate to the application URL http://localhost:8080 2. Log in as USER with valid credentials. 3. In the browser's address bar, enter the direct URL http: //localhost:8080/ui/sales. 4. Press Enter to load the Sales page.	Sales page loads successfully via direct URL.
TC_UI_SALES_USER_03	Active menu highlight	Verify "Sales" menu item is highlighted when Sales page is open	Logged in as USER, on Sales page	1. Launch the browser and navigate to the application URL http://localhost:8080. 2. Log in as USER with valid credentials. 3. Click on Sales in the left sidebar menu. 4. Observe the Sales menu item in the sidebar.	Sales menu item is highlighted as active.
TC_UI_SALES_USER_04	No sales message	Verify that the "No sales found" message appears when there are no sales in the system.	Logged in as USER, no sales records exist in the system	1. Open the Sales page. 2. Observe if the "No sales found" message is displayed in the sales records table.	1. "No sales found" message is displayed in the sales table. 2. Sales table headers remain visible.
TC_UI_SALES_USER_05	Default sorting by Sold Date (descending)	Verify that the sales records are sorted by Sold Date in descending order by default.	Logged in as USER, at least 2 sales with different Sold Dates exist	1. Open the Sales page 2. Compare the Sold At values of the sales records from top to bottom	1. Sales are sorted by Sold Date in descending order. 2. Latest sale appears at the top of the list.
TC_UI_SALES_USER_06	Sell Plant button hidden	Verify that the "Sell Plant" button is hidden or disabled for normal users.	Logged in as USER	1. Open the Sales page. 2. Observe whether the "Sell Plant" button is visible or not.	1. Sell Plant button is not visible to USER. 2. USER cannot access sell functionality.

TC_UI_SALES_USER_07	Delete action hidden	Verify that the Delete action is not visible for the user and only available for Admin users.	Logged in as USER, sales records exist	1. Open the Sales page. 2. Inspect the Actions column of any sale record.	1. Delete action is not visible in the Actions column. 2. USER cannot delete any sale record.
TC_UI_SALES_USER_08	Block access to Sell Plant page by URL	Verify that the user cannot access the Sell Plant page via URL and is redirected to an access denied page.	Logged in as USER	1. Open the browser and go to http://localhost: 8080/ui/sales/new (Sell Plant page URL). 2. Press Enter to load the page.	1. The user should be redirected to a 403 Access Denied page (or equivalent error page). 2. The user should not be able to access the Sell Plant page directly via URL.
TC_UI_SALES_USER_09	Pagination is present	Verify pagination controls appear when sales exceed one page	Verify pagination controls appear when sales exceed one page	1. Open the Sales page. 2. Scroll to the bottom of the sales records table. 3. Observe if pagination controls (Next/Previous buttons or page numbers) are visible below the table.	1. Pagination controls are displayed when records exceed one page. 2. USER can navigate between pages.
UI Test Case - Admin					
TC_UI_SALES_ADMIN_01	Admin sees "Sell Plant" button	Verify that the "Sell Plant" button is visible on the Sales page for Admin users.	Logged in as Admin	1. Open the Sales page. 2. Observe the Sales page for the presence of the "Sell Plant" button.	1. Sell Plant button is visible on the Sales page. 2. Button is enabled and clickable.
TC_UI_SALES_ADMIN_02	Admin can open Sell Plant form	Verify that the "Sell Plant" button opens the Sell Plant form for Admin users.	Logged in as Admin, plants available for sale	1. From the Sales page, click on the "Sell Plant" button. 2. Wait for the Sell Plant form to open.	1. The Sell Plant form should open. 2. The Sell Plant form should display fields for plant selection and quantity input.
TC_UI_SALES_ADMIN_03	Quantity validation against stock	Verify that the Admin cannot enter a quantity greater than the available stock when selling a plant.	Logged in as Admin, plant with available stock	1. From the Sell Plant form, select a plant with available stock. 2. In the quantity field, enter a value greater than the stock. 3. Observe any validation messages.	1. Quantity greater than available stock is not accepted. 2. Validation error message is displayed.
TC_UI_SALES_ADMIN_04	Sale confirmation message	Verify that the Admin receives a confirmation message after successfully completing a plant sale.	Logged in as Admin, sale completed	1. Complete a sale by selecting a plant and entering the quantity in the Sell Plant form. 2. Click Submit to process the sale. 3. Wait for the confirmation message to appear	1. Sale is completed successfully. 2. Confirmation message is displayed.
TC_UI_SALES_ADMIN_05	Delete sale with confirmation	Verify that the Admin can delete a sale only after confirming the deletion action.	Logged in as Admin, sales records exist	1. Open the Sales page with existing sales records. 2. Click Delete on any sale record in the Actions column. 3. Confirm deletion in the confirmation prompt.	1. Confirmation dialog is displayed. 2. Sale record is removed after confirmation.

TC_UI_SALES_ADMIN_06	Default sorting by sold date	Verify that sales records are displayed in descending order based on the sold date for Admin users.	Logged in as Admin, sales records with different sold dates	1. Open the Sales page. 2. Observe the Sold At column for sorting.	Sales should be sorted by Sold Date in descending order (latest sale on top).
TC_UI_SALES_ADMIN_07	No sales message display	Verify that the "No sales found" message is displayed when there are no sales records for Admin users.	Logged in as Admin, no sales exist	1. Open the Sales page. 2. Wait for the page to load.	The message "No sales found" should appear in the sales table when no sales exist.
TC_UI_SALES_ADMIN_08	Cancel Sell Plant form	Verify that clicking the Cancel button in the Sell Plant form returns the Admin to the Sales List page without saving changes.	Logged in as Admin, in the Sell Plant form	1. Open the Sell Plant form. 2. Click on the Cancel button.	Admin should be redirected back to the Sales List page without any changes being made to the sale.
TC_UI_SALES_ADMIN_09	Stock update after sale	Verify that the plant stock is correctly updated after a sale is completed by the Admin.	Logged in as Admin, sales records exist with sufficient stock	1. Sell a plant using the Sell Plant form. 2. After the sale, check the available stock for the selected plant.	1. Stock quantity is reduced by sold amount. 2. Updated stock is reflected in the system.
TC_UI_SALES_ADMIN_10	Total price calculation	Verify that the Total Price of a sale is correctly calculated based on quantity and unit price.	Logged in as Admin, sales records with different total prices	1. Open the Sales page. 2. Observe the Total Price column for the displayed total price.	The Total Price for each sale should be correctly calculated (Quantity * Unit Price).
TC_UI_SALES_ADMIN_11	Sales list update after deletion	Verify that the Sales List is refreshed and updated after a sale is deleted by the Admin	Logged in as Admin, sales records exist	1. Open the Sales page. 2. Delete a sale record. 3. Refresh the page.	The deleted sale record should no longer appear in the Sales List.
API Test Case - User					
TC_API_SALES_USER_01	Fetch all sales	Verify that the user can fetch the list of all sales using the Sales API	User is authenticated and logged in.	1. Open Swagger UI. 2. Execute GET /api/sales as USER.	1. API returns HTTP status 200 OK. 2. Response contains a list of sales records.
TC_API_SALES_USER_02	Fetch sale by ID	Verify that the user can fetch a specific sale using a valid sale ID.	User is authenticated; a sale record exists.	1. Execute GET /api/sales/{id} with a valid sale ID.	1. API returns HTTP status 200 OK. 2. Response contains details of the requested sale.
TC_API_SALES_USER_03	Paginate sales	Verify that the user can paginate sales records using the Sales API.	User is authenticated; multiple sales records exist.	1. Execute GET /api/sales/page?page=0&size=5	1. API returns HTTP status 200 OK. 2. Response contains paginated sales data.
TC_API_SALES_USER_04	Sort sales	Verify that the user can sort sales records using API parameters.	User is authenticated; sales records exist.	1. Execute GET /api/sales/page?sort=soldAt,desc	1. API returns HTTP status 200 OK. 2. Sales records are sorted by Sold Date in descending order.
TC_API_SALES_USER_05	Block sale creation	Verify that the user cannot create a sale using the Sales API.	User is authenticated.	1. Execute POST /api/sales with valid request body.	1. API returns HTTP status 403 Forbidden. 2. Sale is not created.
TC_API_SALES_USER_06	Block sale deletion	Verify that the user cannot delete a sale using the Sales API.	User is authenticated; a sale record exists.	1. Swagger UI. 2. Execute DELETE /api/sales/{id} as USER.	1. API returns HTTP status 403 Forbidden. 2. Sale record is not deleted.

TC_API_SALES_USER_07	Fetch non-existent sale	Verify that the API returns an error when a non-existent sale ID is requested.	User is authenticated.	1. Execute GET /api/sales/{id} with an invalid ID.	1. API returns HTTP status 404 Not Found. 2. Appropriate error message is returned.
TC_API_SALES_USER_08	Filter sales by plant name	Verify that the user can filter sales using plant name if supported by the API.	User is authenticated; sales records exist for multiple plants.	1. Execute GET /api/sales?plantName=Rose.	1. API returns HTTP status 200 OK. 2. Response contains sales related only to the specified plant
API Test Case - Admin					
TC_API_SALES_ADMIN_01	Create sale with valid quantity	Verify that Admin can create a sale using a valid plant ID and quantity.	Admin is authenticated; plant exists with sufficient stock	Execute POST /api/sales with valid plant ID and quantity.	API returns 201 Created. Sale is successfully created
TC_API_SALES_ADMIN_02	Delete sale	Verify that Admin can delete an existing sale using the Sales API.	Admin is authenticated; sale record exists	Execute DELETE /api/sales/{id} with valid sale ID.	API returns 204 No Content. Sale is deleted successfully.
TC_API_SALES_ADMIN_03	Fetch all sales	Verify that Admin can fetch all sales records.	Admin is authenticated.	Execute GET /api/sales.	API returns 200 OK. Sales list is returned.
TC_API_SALES_ADMIN_04	Fetch sale by ID	Verify that Admin can fetch a sale by its ID.	Admin is authenticated; sale exists	Execute GET /api/sales/{id} with valid ID.	API returns 200 OK. Sale details are returned.
TC_API_SALES_ADMIN_05	Block quantity greater than stock	Verify that Admin cannot create a sale with quantity greater than available stock.	Admin authenticated; plant stock is limited.	Execute POST /api/sales/plant/{plantId} with quantity greater than stock.	API returns 400 Bad Request. Validation error message is returned.
TC_API_SALES_ADMIN_06	Block zero or negative quantity	Verify that Admin cannot create a sale with zero or negative quantity.	Admin authenticated.	Execute POST /api/sales/plant/{plantId} with quantity ≤ 0.	API returns 400 Bad Request. Sale is not created.
TC_API_SALES_ADMIN_07	Sell non-existent plant	Verify that Admin cannot create a sale for a non-existent plant.	Admin authenticated.	Execute POST /api/sales/plant/{plantId}s with an invalid plant ID.	API returns 404 Not Found. Error message is returned.
TC_API_SALES_ADMIN_08	Stock reduces after sale	Verify that plant stock is reduced automatically after a sale is created.	Admin authenticated; plant has stock.	Create a sale. Fetch plant details	Stock is reduced by sold quantity.
TC_API_SALES_ADMIN_09	Block decimal quantity	Verify that Admin cannot create a sale using decimal quantity if only integers are allowed.	Admin authenticated.	Execute POST /api/sales/plant/{plantId} with decimal quantity.	API returns 400 Bad Request
TC_API_SALES_ADMIN_10	Missing request parameter	Verify that missing required parameters prevent sale creation.	Admin authenticated.	Execute POST /api/sales/plant/{plantId} without required fields.	API returns 400 Bad Request.
TC_API_SALES_ADMIN_11	Fetch sales for deleted plant	Verify that sales remain visible even if the related plant is deleted.	Admin authenticated; sales exist for deleted plant.	Execute GET /api/sales.	API returns 200 OK. Sales records are still visible.
TC_API_SALES_ADMIN_12	Block selling out-of-stock plant	Verify that Admin cannot create a sale for an out-of-stock plant	Admin authenticated; plant stock = 0.	Execute POST /api/sales/plant/{plantId} with out-of-stock plant.	API returns 400 Bad Request.
TC_API_SALES_ADMIN_13	Delete non-existent sale	Verify that deleting a non-existent sale returns an error.	Admin authenticated.	Execute DELETE /api/sales/{id} with invalid ID.	API returns 404 Not Found.

TC_API_SALES_ADMIN_14	Paginate sales	Verify that Admin can fetch paginated sales records.	Admin authenticated; multiple sales exist.	Execute GET /api/sales/page?page=0&size=5	API returns 200 OK. Paginated data is returned.
TC_API_SALES_ADMIN_15	Sort sales	Verify that Admin can sort sales by date or total price.	Admin authenticated; sales exist.	Execute GET /api/sales/page?sort=soldAt,desc	API returns 200 OK. Sales are sorted correctly.
